Place on a solid and well-leveled surface (wooden patio, lawn, rock dust, concrete slab, etc.).

Fill with your garden hose through the skimmer.

Cover lifter

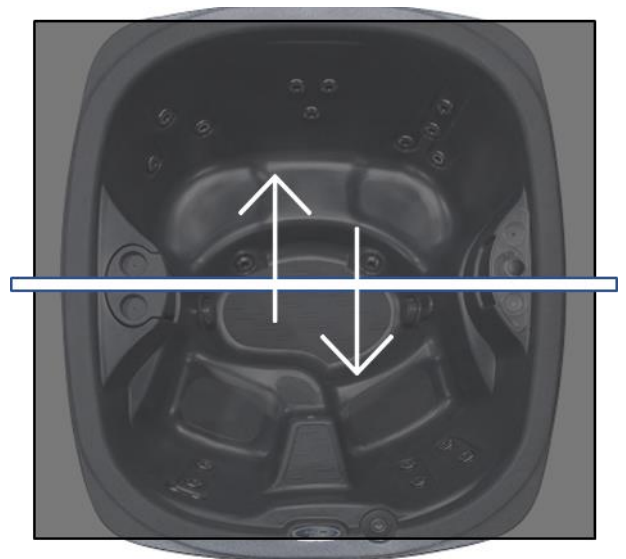

The model #139-rock-it is suitable for the spa and can be ordered from your retailer.

Access

The four sides of the spa are made up of removable panels allowing access to the pump and mechanics.

The spa cover requires a minimal space of 46cm when opened and slid completely to the side.

Spa Cover (Opening Direction)

* TOPSIDE (front)

FAQ

Can I install it on my patio?

Yes, if you make sure your structure can withstand the weight of the spa once filled. Make sure your spa cover is safe from the ice falling from your roof.

Can I put it in a corner?

Yes, only if you retain access to the pump and mechanics via the removable panel. Keep in mind that the spa cover will slide along one side of your spa.

What product should I use to sanitize the water?

Bromine, lithium or biguanide are recommended. The use of chlorine may result in the cancellation of your warranty.

* The connection must be made by a certified electrician.

For details about starting and maintaining the spa, be sure to check the user's guide.

**All dimensions are approximate and may slightly vary.
