- 5 To keep this mode, wait a few seconds. To change it, press **COOL** again then **LIGHT** to display the following mode.

LEARN MORE ABOUT THE WATER HEATING MODES

STANDARD MODE "ST" It maintains the set temperature. The **ST** code is displayed only when this mode is activated.

ECONOMY MODE "EC" It heats the water to the preset temperature only during filter cycles. The **EC** code is displayed when the water temperature is not current, and alternates with the water temperature when the pump is running.

SLEEP MODE "SL" It heats the water to within 10°C (20°F) of the preset temperature only during filter cycles. The **SL** code is displayed when the water temperature is not current, and alternates with the water temperature when the pump is running.
